

BRIGHT COFFEE SALES ANALYSIS

WHERE EVERY CUP IS A STORY

Presented by Nthabiseng Katausha using Miro, Data bricks, Excel and Canva

Lower Manhattan

Hell's Kitchen

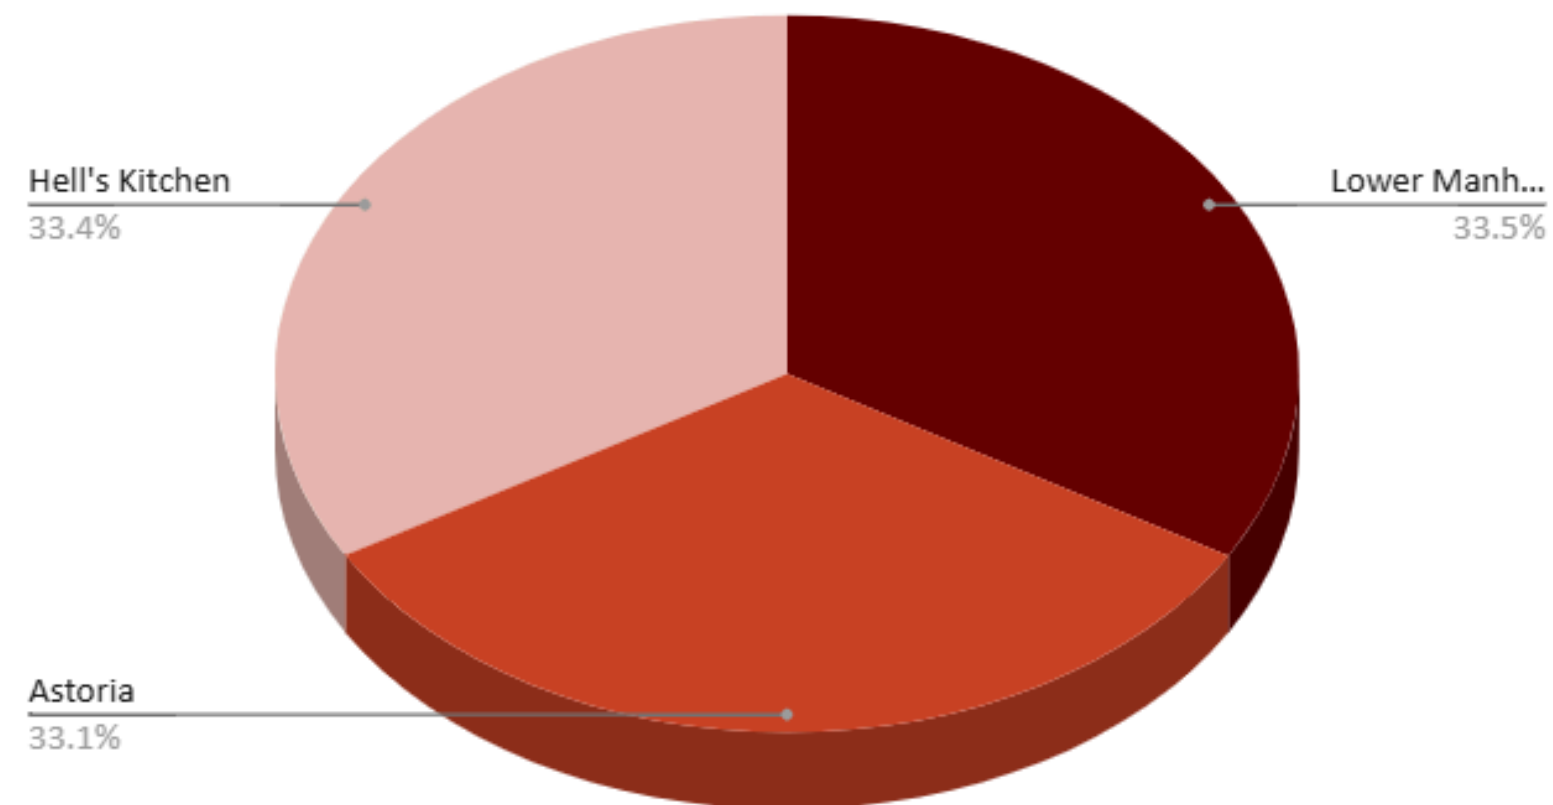

Astoria

OUR STORE LOCATIONS

STORES REVENUE

Revenue Distribution

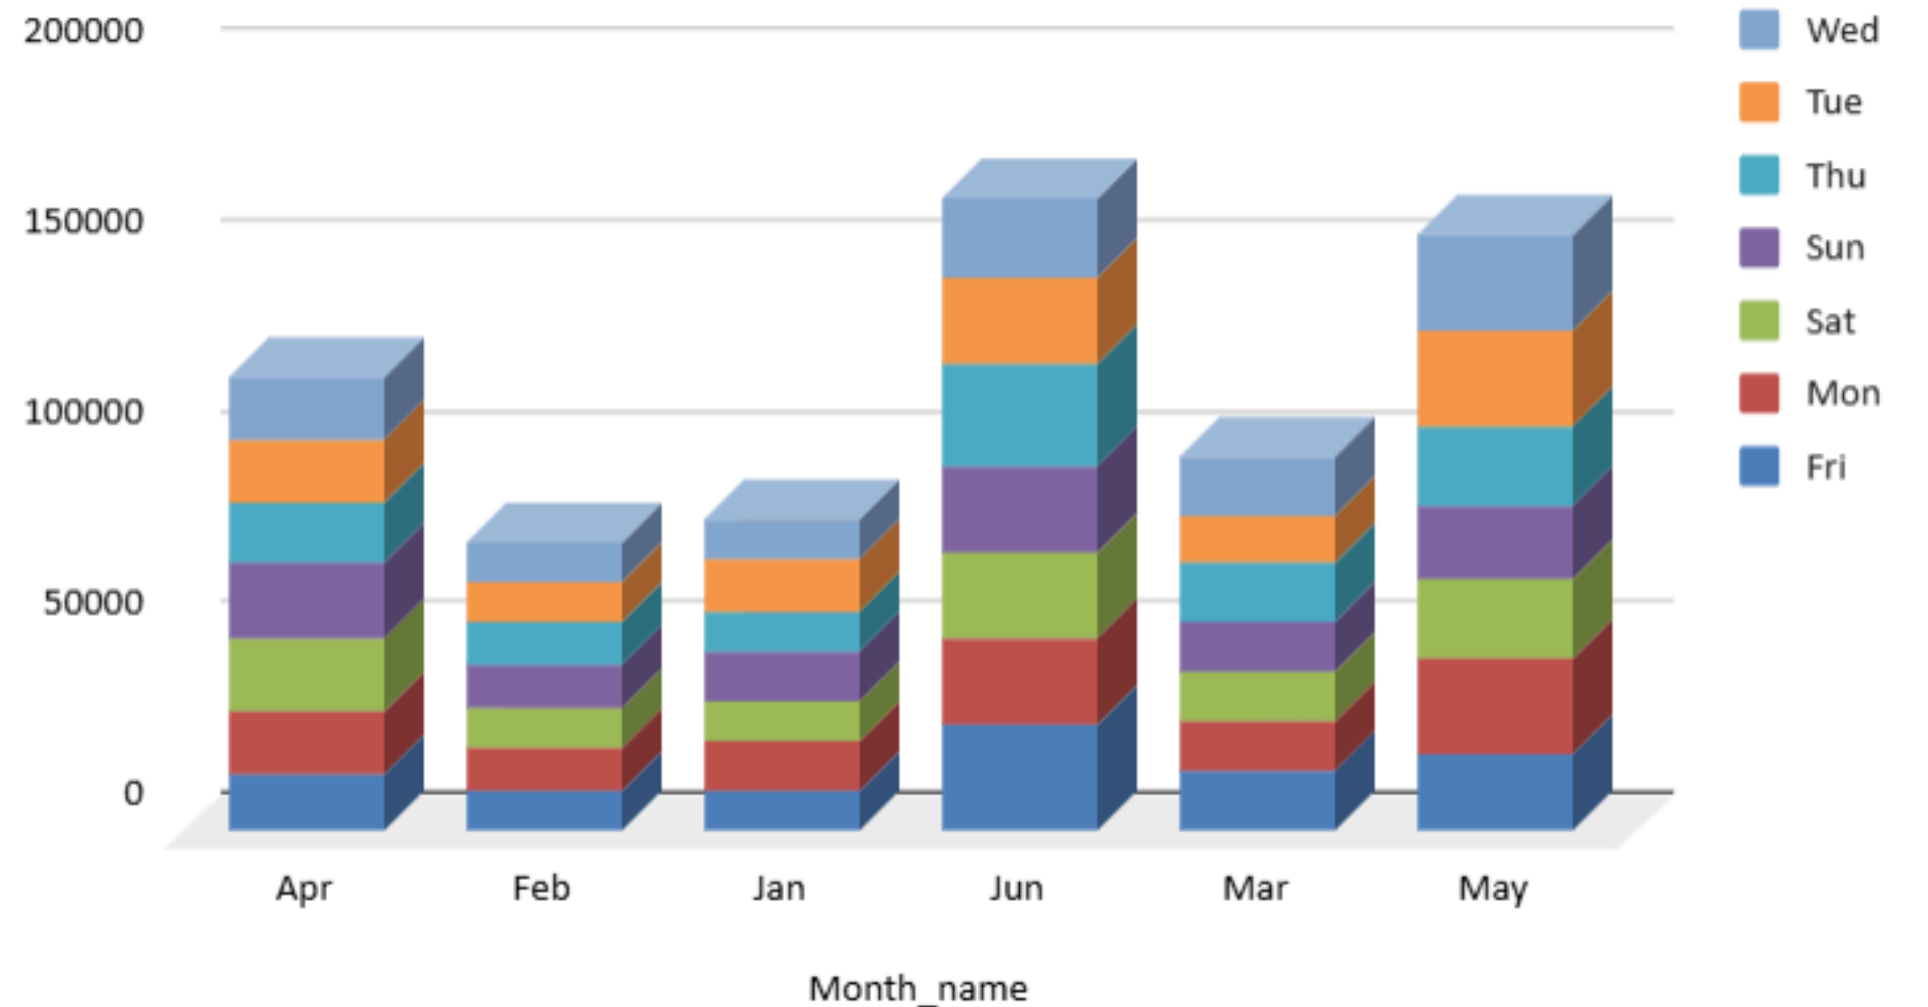

STABLE GROWTH: NEAR-PERFECT REVENUE BALANCE ACROSS ALL HUBS

There is only a 0.4% variance between the highest and lowest-performing stores. This indicates that our brand has consistent appeal across very different demographic areas (from the corporate hub of Lower Manhattan to the residential/vibrant Astoria).

SALES SEASONALITY & TRENDS

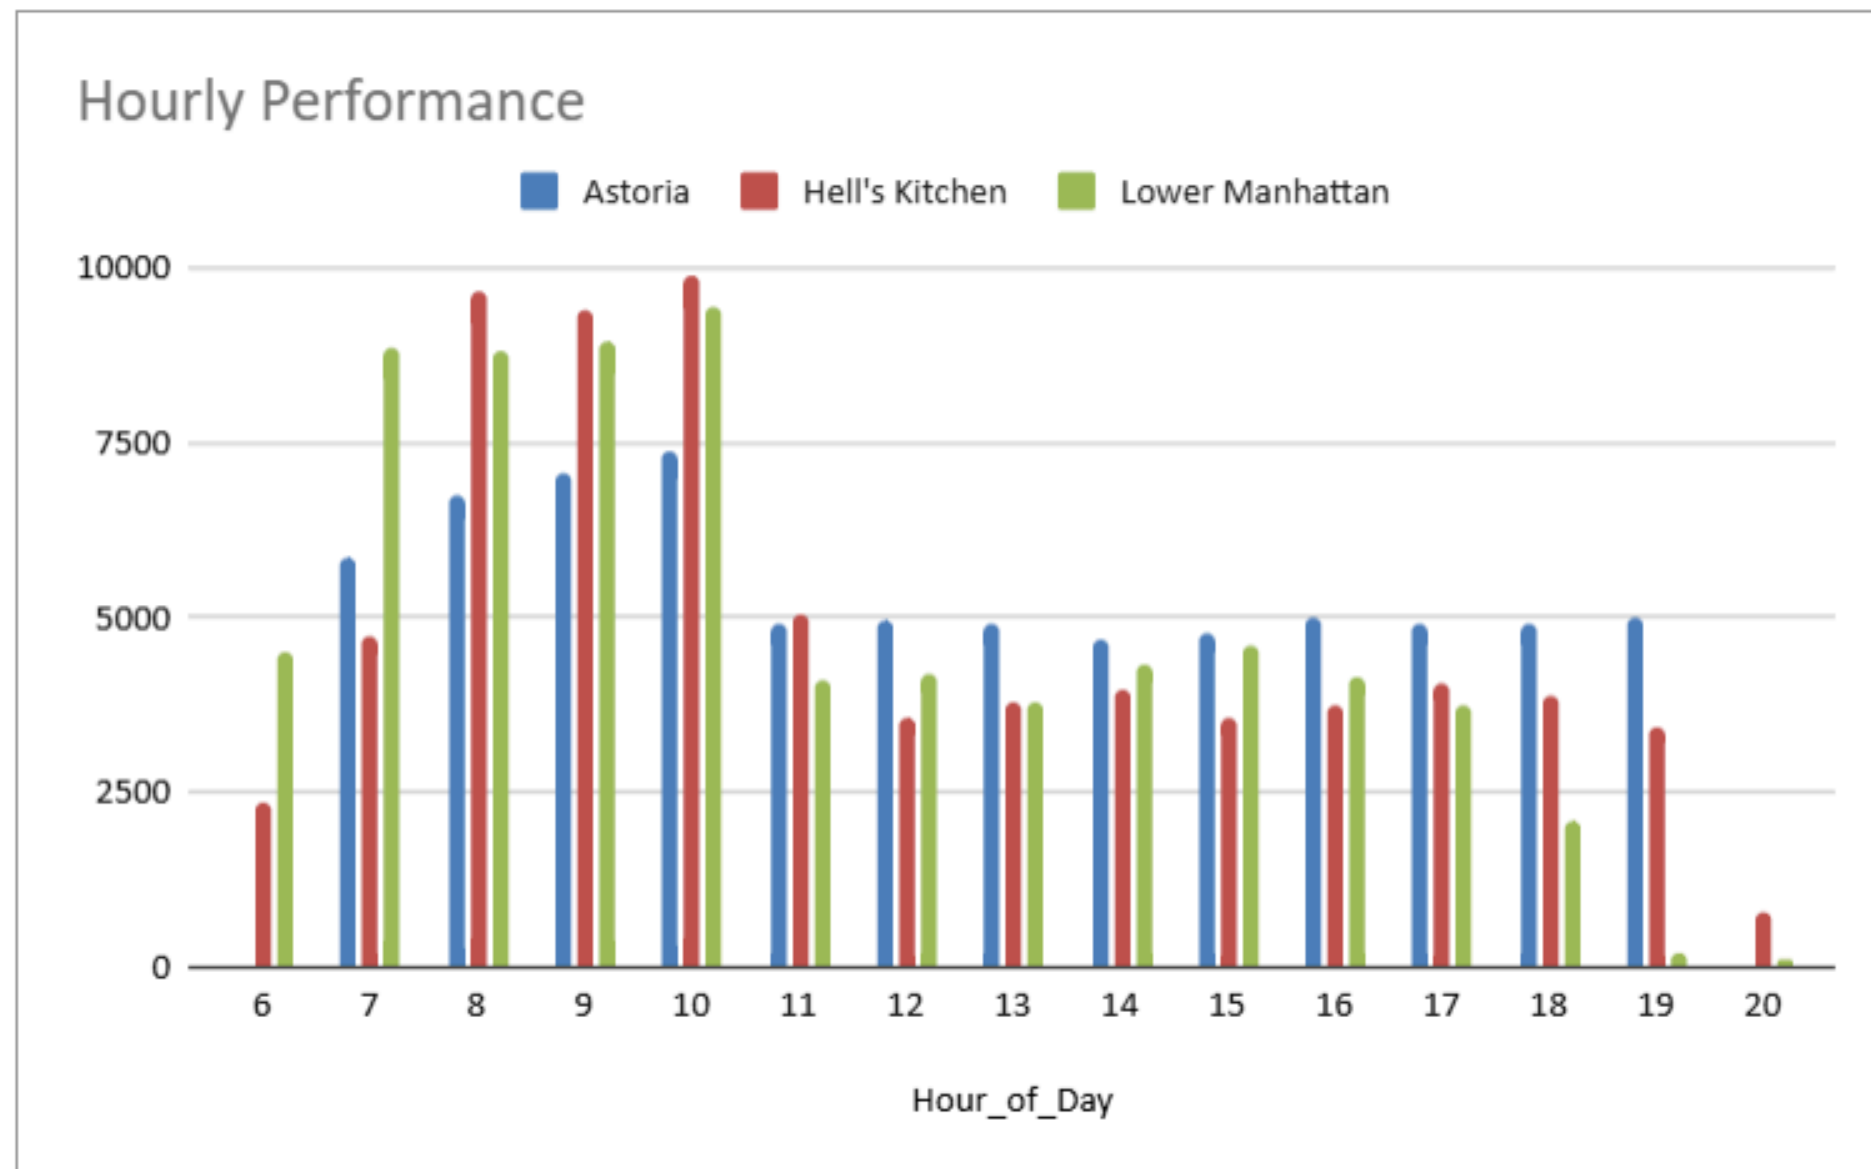

Sales per Month

- Top Performer: June is clearly the strongest month, followed by May. This suggests that warmer weather or local summer events are a massive driver for business.
- The Slump: February and January are the lowest-performing months. This is common in retail post-holiday "wallet fatigue".

HOURLY SALES

The stores have a massive peak between 8:00 AM and 10:00 AM. After 11:00 AM, their sales drop by nearly 50-60%.

The are clearly "Commuter Hubs" where people grab coffee on their way to the office.

SUGGESTIONS AFTER OBSERVATIONS

- You need your most experienced baristas on the floor from 7:30 AM to 10:30 AM to handle the high volume .
- Lower Manhattan's sales at 7:00 PM (19) and 8:00 PM (20) are almost zero. You are likely losing money on electricity and labor by staying open that late. Consider closing this branch at 6:00 PM.
- Loyalty Boost: Offer double loyalty points or "Buy 5, Get 1 Free" specifically in Jan/Feb to keep customers coming back when they are tempted to stay home.
